

## IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

1. (Previously presented) A system comprising:
  - a processor; and
  - a memory, coupled to the processor, wherein the memory is configured to provide the processor with instructions which when executed cause the processor to:
    - determine one or more quantities of damages avoided by one or more blocked attacks; and
    - calculate security consumption during a period of time.
2. (Currently amended) The system of claim 1, wherein determining one or more quantities **of** damages includes determining whether a blocked attack would have exploited a network vulnerability.
3. (Previously presented) The system of claim 2, wherein determining whether a blocked attack would have exploited network vulnerability includes replaying the attack on an internal network.
4. (Previously presented) The system of claim 1, further comprising a scanner configured to scan one or more devices for vulnerabilities.
5. (Previously presented) The system of claim 4, wherein the scanner is configured to quantify the risk of one or more devices.
6. (Previously presented) The system of claim 4, wherein the scanner is located within a customer network.
7. (Previously presented) The system of claim 1, further comprising an intrusion suppression module configured to block attacks.

8. (Previously presented) The system of claim 7, wherein the intrusion suppression module is configured to maintain a list of attacks sustained and blocked during a period of time.

9. (Previously presented) The system of claim 7, wherein the intrusion suppression module is located outside a customer network.

10. (Currently amended) A network security method comprising:  
determining, using a processor, one or more quantities of damages avoided by one or more blocked attacks; and  
calculating security protection consumption during a period of time.

11. (Previously presented) The method of claim 10, further comprising determining whether a blocked attack would have exploited network vulnerability.

12. (Previously presented) The method of claim 10, further comprising scanning one or more devices for vulnerabilities.

13. (Previously presented) The method of claim 12, further comprising quantifying the risk of one or more devices.

14. (Currently amended) The method claim 10, further comprising blocking one or more attacks.

15. (Previously presented) The method of claim 14, further comprising maintaining a list of attacks sustained and blocked during a period of time.

16. (Currently amended) A network security apparatus comprising ~~comprised of~~:  
means for determining one or more quantities of damages avoided by one or more blocked attacks; and  
means for calculating security protection consumption during a period of time.

17. (Original) The apparatus of claim 16, further comprised of the means for determining whether a blocked attack would have exploited network vulnerability.
18. (Original) The apparatus of claim 16, further comprised of the means for scanning one or more devices for vulnerabilities.
19. (Original) The apparatus of claim 18, further comprised of the means for quantifying the risk of one or more devices.
20. (Original) The apparatus claim 16, further comprised of the means for blocking one or more attacks.
21. (Original) The apparatus of claim 20, further comprised of the means for maintaining a list of attacks sustained and blocked during a period of time.
22. (Currently amended) A computer program product embodied in a non-transitory computer-readable storage medium, [[and]] comprising computer executable instructions for:
- determining one or more quantities of damages avoided by one or more blocked attacks;
- and
- calculating security protection consumption during a period of time.
23. (Currently amended) The computer program product of claim [[21]] 22, further comprising computer instructions for determining whether a blocked attack would have exploited network vulnerability.
24. (Currently amended) The computer program product of claim [[21]] 22, further comprising computer instructions for scanning one or more devices for vulnerabilities.
25. (Currently amended) The computer program product of claim [[21]] 22, further comprising computer instructions for quantifying risk of one or more devices.
- 26-28. (Cancelled)

29. (Previously presented) The system of claim 1 wherein the processor is configured to calculate security consumption including by determining a monetary value associated with the damages avoided.

30. (Previously presented) The system of claim 1 wherein the processor is configured to determine one or more quantities at least in part by determining a first portion of damages avoided by a customer and by determining a second portion of damages avoided by a party other than the customer on behalf of the customer.

31. (Previously presented) The system of claim 1 wherein the processor is configured to determine one or more quantities at least in part by determining a count of the one or more blocked attacks.
